

**Amendments to the Claims:**

This listing of claims replaces all prior versions and listings of claims in the application:

1-15. (Cancelled)

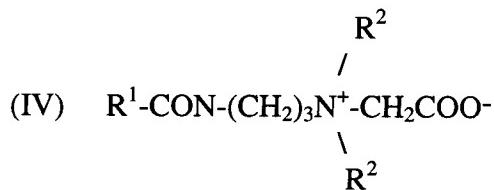

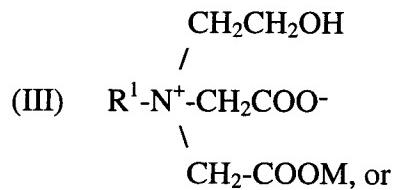

16. (Currently Amended) An aqueous phytopathological formulation comprising:

a hydrosoluble salt of at least one aminophosphate or aminophosphonate class herbicide; at least one principal surfactant selected from alkylbetaines and alkyl(amidoalkyl)betaines; and at least one additive [(iv)] being an alkylmonoglycoside or alkylpolyglycoside.

17. (Previously presented) The formulation according to claim 16, wherein the herbicide is a hydrosoluble salt of N-phosphonomethyl glycine.

18. (Previously presented) The formulation according to claim 16, wherein the herbicide presents a content of between 80 and 510 g/l, expressed in acid herbicide equivalents.

19. (Previously presented) The formulation according to claim 16, wherein the principal surfactant corresponds to one or more of the following formulae:

wherein:

$R^1$  represents a linear or branched alkyl group containing 3 to 30 carbon atoms;

$R^2$ , which are identical or different, represent an alkyl radical; and

$R^3$  represents a hydrogen atom or a  $-CH_2COOM$  radical or an alkyl radical; and

M represents an alkali metal, optionally sodium.

20. (Previously presented) The formulation according to claim 16, wherein the principal surfactant is present in an amount of between 20 and 180 g/l.

21-26. (Cancelled)

27. (**Currently Amended**) The formulation according to claim 16, wherein the additive [[(iv)]] is octylglycoside, an octylpolyclycoside, decylglycoside, a decylpolyglycoside, or a mixture thereof.

28. (**Currently Amended**) The formulation according to one claim 16, wherein the additive [[(iv)]], is present in an amount of between 0 and 150 g/l.

29. (**Currently Amended**) The formulation according to claim 16, wherein the principal surfactant and the additive ~~(iv) has have~~ a proportion by weight of ~~principal surfactant/sum of additives (i) to (iv) of between principal surfactant/additive ranging from~~ 6/1 to 1/2.

30. (Previously presented) The formulation according to claim 16, wherein the principal surfactant and the additive represent a total amount of 60 to 180 g/l of the formulation.

31. (**Currently Amended**) An aqueous phytopathological formulation comprising:  
a hydrosoluble herbicide salt of

alkali metals, secondary or primary amines, diamines, alkanolamines, or sulphoniums,  
with

N-phosphonomethyl glycine

at least one principal surfactant selected from alkylbetaines and alkyl(amidoalkyl)betaines; and

at least one additive [[(iv)]] being an alkylmonoglycoside or alkylpolyglycoside.

32. **(Canceled)**
